

RAYMOND A. WALLACE, ACCOUNTANT

QuickRemote Bookkeeping

We use an online service called "GoToMyPC.com" to enter data, reconcile bank accounts, prepare your customer billing, enter accounts payable and pay your bills remotely.

Here is how it works. GoToMyPC.com is a Citrix company product that creates a secure virtual private network connection from our server to your company PC. We then can enter your computer with a password and access code that you provide us and perform the necessary bookkeeping or billing task and free you up to go about your business.

GoToMyPC.com's annual fee is roughly \$180. Our fee is based on an hourly rate for the time that we spend performing whatever task you require from us. Our hourly rate for this service starts at \$45 per hour.

If your company already has its own secure virtual private network, you could set us up as a user with permissions to access only your QuickBooks files. Then we could perform those tasks that you require from us in QuickBooks.

There is a third way that we can enter your computer to perform the required tasks and that is by using Remote Desktop Connection. This is a less secure method and we generally advise our clients to allow us to use one of the other two methods of access. However, this method is less costly than creating a VPN connection, whether it is GoToMyPC.com or Microsoft Server software.
